

E-Tech Resources Inc.
Management Discussion and Analysis
Annual Report – March 31, 2023

This Management's Discussion and Analysis ("MD&A") of E-Tech Resources Inc. ("E-Tech" or the "Company"), is dated July 27, 2023 and provides an analysis of the financial operating results for the year ended March 31, 2023. This MD&A should be read in conjunction with the audited financial statements of E-Tech for the years ended March 31, 2023 and 2022, which have been prepared in accordance with International Financial Reporting Standards ("IFRS"). All amounts are in Canadian dollars ("CAD\$") unless otherwise specified.

Except for the historical statements contained herein, this MD&A presents "forward-looking statements" within the meaning of Canadian securities legislation that may involve inherent risks and uncertainties. Forward-looking statements include, but are not limited to, future developments; use of funds; and the business and operations of the Company. Generally these forward-looking statements can be identified by the use of forward-looking terminology such as "plans", "expects" or "does not expect", "is expected", "proposed" "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates" or "does not anticipate", or "believes", or variations of such words and phrases or statements that certain actions, events or results "may", "could", "would", "might" or "will be taken", "occur" or "be achieved".

Forward-looking statements are subject to known and unknown risks, uncertainties and other factors that may cause the actual results, level of activity, performance or achievements of E-Tech to be materially different from those expressed or implied by such forward-looking statements. Such factors include, but are not limited to, amongst others, the results of due diligence activities, the actual results of current exploration activities and the interpretation of those results, changes in project parameters as plans continue to be refined; future metal prices; failure of equipment or processes to operate as anticipated; labour disputes and other risks of the mining industry; delays in obtaining governmental approvals or financing or in the completion of exploration, general business, economic, competitive, political and social uncertainties; delay or failure to receive board, shareholder or regulatory approvals; as well as those factors disclosed in E-Tech's publicly filed documents. There can be no assurance that such statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Although the management and officers of E-Tech believe that the expectations reflected in such forward-looking statements are based upon reasonable assumptions and have attempted to identify important factors that could cause actual results to differ materially from those contained in forward-looking statements, there may be other factors that cause results not to be as anticipated, estimated or intended. There can be no assurance that such statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements. E-Tech does not undertake to update any forward-looking statements that are incorporated by reference herein, except in accordance with applicable securities laws.

Peter Siegfried, a consulting geologist, serves as the Company's Qualified Person, as defined by Canadian National Instrument 43-101, for the Company's exploration projects. Mr. Siegfried has reviewed the technical information provided in this MD&A.

Description of Business

E-Tech Resources Inc. ("E-Tech" or the "Company") was incorporated under the Canada Business Corporations Act on April 20, 2018. The Company was classified as a Capital Pool Company as defined in the TSX Venture Exchange (the "TSXV") Policy 2.4. The principal business of the Company was the identification and evaluation of a Qualifying Transaction ("QT") and once identified and evaluated, to negotiate an acquisition or participation in a business subject to receipt of shareholder approval, if required, and acceptance by regulatory authorities.

The Company and E-Tech Kalapuse Mining (Proprietary) Limited ("E-Tech Namibia"), a private company involved in the business of rare earth element ("REE") exploration, entered a definitive share exchange agreement (the "Definitive Agreement") dated October 10, 2020 under which the

Transaction would be completed. The Boards of Directors of the Company and E-Tech Namibia each unanimously approved the terms of the Transaction. As a result of the Transaction, the Company changed its name to E-Tech Resources Inc. and adopted a financial year end of March 31st effective on the closing of the Transaction on October 15, 2021. On October 21, 2021, the Company commenced trading on the TSXV under the symbol REE and co-listed on the Frankfurt Stock Exchange (“FSE”) under the symbol K2I on January 5, 2022.

The principal business of the Company is the exploration and development of resource properties. The Company is in the process of exploring its resource properties and has not yet determined whether these properties contain resources that are economically recoverable. To date, the Company has not earned significant revenues and is considered to be in the exploration stage.

Qualifying Transaction with E-Tech Namibia

In the Company’s Definitive Agreement with E-Tech Namibia, an arm’s length party to the Company, and the holders of all of the outstanding shares of E-Tech Namibia (the “E-Tech Namibia Shares”), facilitated the completion of a business combination with the Company.

On June 2, 2021, the Company entered into an agreement amending its Definitive Agreement with E-Tech Namibia. Amendments included (i) a financing be conducted through the issuance of subscription receipts as opposed to a financing conducted by offering shares of E-Tech Namibia (the “Offering”), (ii) the proposed completion of a stock split on the basis of two post-split common shares of the Company for every one pre-split common share, and (iii) the exchange ratio of the share exchange has been adjusted for the stock split such that each ordinary share of E-Tech Namibia converted into 111,111.2 post-split common shares of the Company.

The agreement with E-Tech Namibia constituted the QT of the Company, as such term is defined in Policy 2.4 of the TSXV and resulted in a reverse takeover of the Company. The QT was also subject to the approval of the disinterested shareholders of the Company, which was received and the Transaction became effective on October 15, 2021.

To give effect to the amended Definitive Agreement, parties to the agreement took several actions, (altogether, the “Transaction”), including:

- The Company completed a name change from Battery Road Capital Corp. to E-Tech Resources Inc.;
- The Company conducted a 2 for 1 stock split, resulting in 25,971,500 shares being issued in exchange for the 12,985,750 issued and outstanding common shares of the Company;
- The Company completed a concurrent \$5 million financing of subscription receipts which converted into post-split common shares of the Company;
- E-Tech Namibia initially had 200 issued and outstanding common shares;
- Convertible debentures of E-Tech Namibia in the amount of \$1,596,000 converted into an additional 133 ordinary shares of E-Tech Namibia with a value of \$12,000 per share;
- The exchange of shares contemplated in the Definitive Agreement resulted in 37,000,030 common shares being issued to the shareholders of E-Tech Namibia based on an exchange ratio of 111,111.2 shares for each of the 333 issued and outstanding shares of E-Tech Namibia;
- Subscription receipts issued under the Offering converted into 20,000,000 post-split shares of the Company; and
- As a result of the Transaction, the Company has 82,971,530 issued and outstanding common shares.

In substance, the Transaction involved E-Tech Namibia shareholders obtaining control of the Company. As the Company did not meet the definition of a business prior to the Transaction, the Transaction is outside the scope of IFRS 3 - Business Combinations. The Transaction has therefore been accounted for under IFRS 2 - Share-based payment. Under this basis of accounting, the consolidated financial statements of the combined entity will represent the continuation of E-Tech Namibia by which E-Tech Namibia acquired the net assets and listing status of the Company as of October 15, 2021. Accordingly, the Transaction will be considered a reverse takeover transaction (“RTO”) with E-Tech Namibia acquiring the Company.

The excess of the estimated fair value of the equity instruments that E-Tech Namibia is deemed to have issued to acquire the Company, plus the transaction costs less the estimated fair value of the Company’s net assets (collectively the “Consideration”), are recorded as a listing expense as a cost of obtaining Reporting Issuer status.

The accounting for this Transaction resulted in the following:

- The consolidated financial statements are issued under the legal parent, E-Tech Resources Inc., but are considered a continuation of the financial statements of the legal subsidiary, E-Tech Namibia.
- Since E-Tech Namibia is deemed to be the acquirer for accounting purposes, its assets and liabilities are included in the consolidated financial statements at their historical carrying values.
- There has been an elimination of the Company’s pre-acquisition net share capital of \$780,745, contributed surplus of \$757, and the accumulated deficit of \$659,379.

Management and Director Updates

Effective upon completion of the Transaction on October 15, 2021, the Company appointed Daniel Whittaker, John Philpott, Christopher Drysdale, Edward Loye, and Ken Marshall to its Board of Directors. In addition, Elbert Loois was appointed as the Company’s Chief Executive Officer (“CEO”) and Robert Randall was appointed as the Company’s Chief Financial Officer (“CFO”). Effective May 17, 2022, the Company announced that Mr. Whittaker would be replacing Mr. Loois as the Company’s CEO on an interim basis. In addition, Mr. Drysdale was appointed as interim VP Operations effective May 17, 2022.

Effective August 23, 2022, Professor Frances Wall was appointed as a director of the Company. Professor Wall replaced Mr. Edward Loye, who remains as a technical consultant to the Company.

On September 27, 2022, the Company held its annual meeting and Jim Megann, John Philpott, Ken Marshall, Christopher Drysdale, and Frances Wall were elected as directors of E-Tech. In addition, the Company appointed Mr. Megann as interim CEO, replacing Daniel Whittaker, who stepped down as interim CEO in order to direct his focus to the expansion of other exploration projects. In addition, Christopher Drysdale resigned as VP Operations and continues as a technical consultant to the Company.

On July 17, 2023, Todd Burlingame was appointed as the Company’s CEO. Mr. Burlingame has experience with several resource development companies and major projects, and he has played a pivotal role in advancing rare earth element projects in Canada.

Resource Property – Namibia

EPL 6762

The Company's Eureka project lies within Exclusive Prospecting Licence ("EPL") number EPL 6762, which covers Eureka Farm 99 and Sukses Farm 90 and encompasses a roughly rectangular area totalling 3,474 hectares. The Company obtained EPL 6762 by entering into an agreement with Kalapuse General Dealers (Pty) Ltd ("KGD"), who agreed to extract the Eureka licence area EPL 6762 from its EPL 5469 licence area with the consent of Namibia's Ministry of Mines and Energy in a letter received on June 15, 2017. Pursuant to the agreement with KGD, E-Tech Namibia agreed to:

- pay an initial non-refundable payment of £7,500 to KGD (the "Initial KGD Payment"), which has been paid in full;
- pay a second non-refundable payment to KGD of £7,500 for the successful completion of phase 1 and excision of the area of interest into a new exclusive prospecting licence (the "Second KGD Payment"), of which £3,250 has been paid;
- pay a third non-refundable payment to KGD of £50,000 (exclusive of VAT) upon successful completion of phase 2 and commencement of a pre-feasibility study (the "Third KGD Payment");
- pay KGD a royalty of 1.5% of the gross value of products sold from mining the deposit until production is terminated (the "KGD Royalty").

EPL 6762 was awarded to the Company on February 12, 2018 for an initial three-year duration for the exploration of base and rare metals, industrial minerals, nuclear fuel minerals and precious metals until February 11, 2021. E-Tech received a notice of preparedness to grant the renewal of EPL 6762 on July 20, 2021 from the Ministry of Mines and Energy of Namibia for a further period of two years until July 19, 2023, for which the renewal application has been filed as of the date of this report. The Company continues to have full and exclusive right, including receipt of all required permits, licences and other applicable government approvals in respect of EPL 6762, enabling E-Tech to carry out its exploration activities as per the most recent work program filed with the Ministry.

An Environmental Clearance Certificate ("ECC") to undertake prospecting activities was originally granted to E-Tech on behalf of KGD on November 30, 2016 by the Ministry of Environment and Tourism, Namibia. Following the issuance of EPL 6762 to E-Tech, an updated ECC to undertake prospecting activities was granted on August 3, 2018 by the Ministry of Environment, Forestry and Tourism, Namibia, for a three-year duration until August 2, 2021. The ECC was granted though application undertaken by Alex Speiser Environmental Consultants (ASEC) CC, a company which completes bi-annual environmental status reports on the EPL 6762. On August 27, 2021, the ECC was renewed for a further three-year duration.

Historical exploration

A number of geophysical anomalies as well as areas with outcropping mineralisation were tested with a 19 hole Reverse Circulation ("RC") drilling campaign (totalling 610 m) in March 2017. Drilling was undertaken by Hammerstein Mining & Drilling CC using a conventional RC rig with onboard compressor. In total, 18 out of the 19 drill holes intersected mineralized carbonatite with an intersected length of between 1 and 9 m. It should be noted that intersected length is greater than the true width of the mineralisation when the drilling intersection is at a shallow angle. The deepest intersection was 60 m below surface.

During the year ended March 31, 2020, E-Tech Namibia completed a more detailed mapping, trenching and drilling program. The trenching conducted totalled 1,175 m and was effective in locating mineralisation under calcrete cover. The exploration strategy used by E-Tech at that time was focused on mapping and geophysics to generate targets for more detailed investigation as the project advanced.

Recent exploration

Radiometric Survey Campaign

In September 2021, additional wide-spread radiometric anomalies were identified from historical ground radiometric data. Additionally, the Company purchased the Government regional airborne geophysical data, including magnetic and radiometric data. Interpretation of these data sets led to the identification of multiple areas of interest.

A brief ground truthing program began in November 2021. These areas of interest were revisited in June 2022 for more detailed investigation (see *2022 Widespread Exploration Program* below)

Trenching

Additional trenching commenced in November 2020. 17 trenches were completed totalling 2,450 m. The trenches were logged with a Rad Eye scintillometer and the resultant CPS (Counts Per Second) readings were plotted. The trenches tested the eastern part of Zone 1 where an early model predicted the dykes to continue along strike in a south easterly direction. These trenches were also extended to the southwest of this area where a number of new targets have been delineated by scintillometer readings.

These trenches provided a more comprehensive coverage at Zone 3 and extend the presence of known carbonatite dykes in the trenched area to the south and east. A number of new drilling targets were defined, some of which correspond to mapped carbonatite dyke outcrops.

Four trenches were excavated in Zone 4. The scintillometer results from these trenches, along with newly mapped carbonatite dyke outcrops, show similar mineralisation as that located in the trenches in Zones 1 and 3, however, the scintillometer readings were weaker and were found over thinner widths than in Zones 1 and 3. All trenches have been backfilled and rehabilitated to the satisfaction of the ASEC's bi-annual Environmental Field Assessment.

In August 2021, a further 22 trenches were completed totalling 5,850 m. Trenches were planned to cover lateral extension targets within Zones 2, 3 and 4. The scintillometer results show comparable responses to those previously found in trenches in Zones 1 and 3. These trenches were all radiometrically and geologically logged in a similar fashion as described above, although no samples were collected. All trenches have been backfilled and rehabilitated to the satisfaction of the ASEC's bi-annual Environmental Field Assessment.

Reverse Circulation ("RC") Drilling

A 3,300 m RC drilling program was carried out from December 2020 to March 2021 to test the lateral and depth extent of the targets in Zone 1 and Zone 3. The program was originally planned for 4,500 m of drilling, however, after intersecting significant groundwater at depth, this resulted in the program only completing 3,300 m of drilling in 23 holes. Geological RC chip logging augmented with down hole scintillometer probe results indicate that this drilling program encountered similar carbonatite dykes as those intersected previously.

Each drilled metre was collected from the rig-mounted cyclone and then split in a 7:1 splitter; the split fraction was then split again 1:1 (2 way) to create two approximately 2 kg sub - samples. All sample bags were marked with the hole ID and the interval depth. Samples to be sent for assay were selected based on lithological logging (carbonatite) and/or elevated radiation (>60 CPS typically). The selected samples were re-bagged and marked with a sample code and a corresponding sample ticket was placed

into the bag with the sample. A sample sheet was created to catalogue the samples that had been selected for analysis which was entered into the Company's database.

A total of 1,725 RC drilling samples (including standards, laboratory duplicates and blanks) were assayed for the 2021 RC campaign. The assay results of significance are displayed in Table 1 below.

Table 1

Hole	From	To	Width (m)	TREO %	Coordinates (X and Y)		Zone
ER002	71	74	3	3.8	526445	7562549	Zone 1
ER002	103	110	7	1.4			Zone 1
ER020	15	21	6	1.4	526451	7562487	Zone 1
ER023	54	62	8	4.5	526322	7562506	Zone 1
ER009	63	78	15	1.4	526337	7562260	Zone 3 Central
ER014	118	121	3	8	526325	7562091	Zone 3 Central
ER003	64	66	2	3.5	526102	7562282	Zone 3 West
ER005	65	67	2	5.1	526160	7562284	Zone 3 West
ER018	103	111	8	1.4	526206	7562205	Zone 3 South

Significant intercepts from the 2021 RC campaign. Sample locations are provided in UTM Zone 33S coordinates. Reported intercepts are drilled lengths while the true thickness of the mineralisation is estimated to range between 60 and 80 per cent of the drilled lengths. Further drilling is necessary to establish the true thickness of the dykes.

In October 2022, the Company disclosed results from the Phase 2 RC drilling campaign completed in January 2022. The program was designed to test the extensions of Zones 1, 2 and 3 as well as test the newly identified Zone 4 for the first time. RC holes in Zone 2 were designed to test the western extension of the carbonatite dykes and test the occurrence of a number of parallel dykes within the zone. RC holes planned for the southern Zone 3 were to test carbonatite dyke outcrops recently revealed by trenching. RC holes planned for Zone 4 were to test for the presence of carbonatite dykes at depth and along the 500 metres where carbonatite dykes had been previously discovered by trenching.

Each drilled metre was collected in the same way as the December 2020 to March 2021 RC campaign. A rig-mounted cyclone, 2-way splitter was utilised and two approximately 2 kg sub – samples collected. Samples sent for assay were selected based on lithological logging (carbonatite) and/or elevated radiation (>60 CPS typically). The selected samples were marked and given a sample ticket code. All samples were recorded on a sampling sheet and have been included in the Company's database.

A total of 661 RC samples (including standards, duplicates and blanks) from the 39 hole 1,440 metre RC drilling program were submitted for analytical work at Activation Laboratories Ltd. Results confirm the continuation of mineralisation along strike of Zone 3 and Zone 2. The eight RC drill holes completed in Zone 4 all successfully encountered carbonatite dykes near surface with encouraging grades of REE mineralisation.

The significant results for these 39 holes are outlined in Table 2 below.

Table 2

<i>incl.</i>	50	51	1	1.1			Zone 2

Significant intercepts from the 2022 RC Campaign. Hole locations are provided in UTM Zone 33S. All RC drill holes were drilled at 205 degree azimuth (drill direction) and 60 degree inclination angle. Reported intercepts are drilled lengths while the true thickness of the mineralisation is estimated to range between 60 and 80 per cent of the drilled lengths.

Diamond Drilling (“DD”)

A 5,761 m diamond drilling program was completed in August 2021. 20 diamond drillholes were drilled to depths of between 200 m and 300 m. All holes were collared and drilled with HQ and continued to depth with NQ diameter core. Core recovery exceeded 95%. The drill core has been geologically logged, structural measurements recorded and chosen intercepts sampled for geochemical analysis. A total of 1,289 half-core samples (including QA/QC) were submitted for assay.

The Company has received and disclosed the results of the 20 drillholes. The significant results for these 20 holes are outlined in Table 3 below. These results indicate monazite bearing carbonatitic dykes have been intersected at depth, beyond the current resource estimate by SRK (UK) as disclosed on September 15, 2021. These results also confirm the presence of monazite bearing carbonatite dykes at a vertical depth of up to 255 m from surface in Zone 2 and 194 m in Zone 1, while remaining open at depth and along strike. The intersections of monazite bearing carbonatitic dykes suggests the connectivity of Zone 1 and Zone 2, however further drilling is required to be more confident of this interpretation.

Significant intercepts from the 2021 DD campaign. Sample locations are provided in UTM Zone 33S coordinates. Reported intercepts are drilled lengths while the true thickness of the mineralisation is estimated to range between 60 and 80 percent of the drilled lengths. Further drilling is necessary to establish the true thickness of the dykes.

In October 2022, the Company announced the results of the Phase 2 diamond drill program which consisted of 11 holes, completed in January 2022. A total of 376 half-core samples (including standards, duplicates and blanks) from 2,226 metres of diamond drilling program were submitted for analytical work at Activation Laboratories Ltd.

These 11 drill holes were drilled to an average depth of 200 m. All holes were collared and drilled with HQ and continued to the end of hole with NQ diameter core. All drill core was handled in the same manner as Phase 1 (noted above).

This DD program aimed to further define the depth extent of the carbonatite dykes in Zone 1, as well as providing further resolve on structural and lithological controls on mineralisation in Zones 1, 2 and 3. It further tested mineralisation beyond the reach of the RC drilling completed within the southern portion of Zone 3. In the northern part of Zone 3, the aim was to test the presence of carbonatite dykes at shallower depths.

The significant results for these 11 holes are outlined in Table 4 below.

Table 4

Hole	From	To	Width (m)	TREO %	Coordinates (X and Y)		Zone

Significant intercepts from the 2022 DD campaign. Hole locations are provided in UTM Zone 33S. Reported intercepts are drilled lengths while the true thickness of the mineralisation is estimated to range between 60 and 80 per cent of the drilled lengths. Further drilling is necessary to establish the true thickness of the mineralisation.

2022 Widespread Exploration Program

The majority of the exploration work completed by the Company has primarily been focused on further delineating the numerous high-grade (> 4% TREO) discoveries known as Zone 1, 2 and 3 respectively. Results from these programs further demonstrate the potential for significant REE mineralisation in the broader licence area.

In June 2022, the Company focused exploration efforts in identifying new target areas within the broader Eureka Project. With the objective of identifying favourable geophysical and geological properties which mirror those of the original Eureka Zone discoveries and additional areas of potential mineralisation.

The Company contracted Gregory Symons Geophysics (“GSG”) in June 2022 to conduct a detailed high resolution ground radiometric survey. In total, 1,224 line kilometres (“km”) of radiometric data was collected over two phases across seven (7) grids, with a line spacing 25 m in a north-south orientation. Orientation of radiometric survey lines is determined by topography to ensure the smoothest route for the detector. The system was mounted on a quad bike that was operated at 5 km/h to collect radiometric data up to 1Hz on a 5 x 7 km grid in two phases, collecting two times more data than what was collected with walk survey over the Eureka Carbonatite.

- The data was collected with an MS-1000 Csl (1-liter) scintillation detector which is equipped with the Medusa Detector Operating System (mDOS) on an ALGIZ RT8 Android Tablet;
- The Spectrometer and tablet communicating via Wi-Fi and are both mounted on a quadbike;
- The embedded software on the sensor logs the DGPS (RTK-enabled) together with spectra, and it outputs K, U, Th values;
- A handheld GPS also mounted on the quad bike was used to navigate through planned lines to survey.

Simultaneously to the radiometric survey, the Company contracted Remote Exploration Services (“RES”) to conduct a high-resolution ground magnetic survey. A total of 1,151.5 line kilometres were completed at 25 m spacing in a NW orientation. RES utilised a GEMSys GSM19 Overhauser magnetometer to collect base data and another GEMSys GSM19 Overhauser magnetometer to collect

walk data. The walk magnetometer was set to a sample frequency of 1 Hz while continuously walking along survey lines. This resulted in an along-line sample density of approximately 2 m. The objective of the ground magnetic survey was to better define the regional fabric and other structural features. Mineralisation in the Zone discoveries is interpreted to be parallel to the fabric of the host Etuis rock formation, and an improved understanding of this regional fabric would further aid in effective target delineation.

Concurrent geological traverse field mapping was conducted over areas that had previously not been investigated. Field mapping points further provided lithological data to support target delineation.

In November 2022, the Company announced the delineation of 17 drill targets and initiated the exploration drill program comprising 38 planned drill holes totalling 3,040 metres. As at the date of this report, a total of 17 holes totalling 1,360 metres have been completed. This is the first drilling conducted to test regional targets on the project outside of Zones 1 to 4. Fifteen drill holes targeted prominent high thorium radiometric anomalies proximal to favourable structural features while two holes targeted encouraging structural and lithological features identified during the geological mapping campaign. The table below is a summary of the drill hole locations.

Hole	X coordinate	Y coordinate	Azimuth	Inclination	Depth (m)
ER063	525126	7562544	360	-90	80
ER064	525924	7562961	360	-90	80

ER079	528457	7561068	160	-60	80

Drill hole locations from the November 2022 exploration drilling RC Campaign. Hole locations are provided in WGS84 UTM Zone 33S.

Preliminary pXRF drilling results from ER065 confirm the discovery of a new mineralised zone at T09, the Adder Target, expanding beyond the previously known zones. These results confirm the presence of REE mineralisation in multiple zones in a drill hole correlating with REE mineralisation identified on surface. Mineralisation remains open at depth and along strike. pXRF results provide only a preliminary indication of the presence of REE mineralization in samples. Accurate determination of REE content still requires analysis of samples by an accredited, certified laboratory. All samples will be submitted to an accredited laboratory for further analysis to confirm mineralised intersections. Preliminary intersections are summarized in the table below.

Hole	X coordinate	Y coordinate	From (m)	To (m)	Lithology	TREO% Intercept (pXRF)	Comment
ER065	526475	7563325	37	38	EQTZ	1 m @ 0.17% TREO	
			40	41	EQTZ	1 m @ 0.71% TREO	Best intercept
			49	50	EQTZ	1 m @ 0.10% TREO	
			73	76	EQTZ	3 m @ 0.07% TREO (700 ppm)	incl. 1 m @ 0.09% (900 ppm) TREO (73-74 m)

Preliminary pXRF results for ER065. Drill hole coordinates are in WGS84 UTM Zone 33S.

The Company is using a SciAps X-555 pXRF analyzer equipped with a 55kV X-ray tube enabling it to detect all LREEs, Eu and Gd (HREEs), as well as Y, along with a range of transition elements and heavy metals. For presentation of the pXRF results, the TREO% is the sum of all oxides of Light Rare Earth Elements (LREE: La, Ce, Nd, Pr, Sm), Eu and Gd of the Heavy Rare Earth Elements (HREE), and Y. Comparisons between measured pXRF results and historical ActLabs laboratory results for analytical work has confirmed the reliability of the Company's pXRF results. Under current conditions the pXRF results give the Company a robust indication of which samples are mineralised prior to receipt of laboratory results. These results are being combined with structural analysis from the downhole televiewer surveys as well as detailed surface mapping to assist with follow-up planning.

During the widespread exploration mapping program, 38 rock chip grab samples were collected and submitted for assays to Activation Laboratories Ltd. The purpose of this sampling was to provide follow-up to the 2022 exploration drilling program and allow for validation of exploration targeting methods to assist in the development of additional targets and prioritization of future drill targets. Two of these samples located approximately 800 m from Zone 1, within drill target T09, returned grades of 6.84% TREO (sample P6860) and 5.22% TREO (sample P6859). An additional four (4) samples returned assays grading between 0.48% and 3.05% TREO, validating new targets defined by the Company. The ongoing prospecting program's observations and results indicate substantial potential for REE mineralisation in the broader area. The table below summarizes the rock chip grab samples that were submitted to the lab and their assay results.

Sample ID	X coordinate	Y coordinate	Lithology	Sample Type	TREO%

Summary of the collected rock chip samples and their assay results. Coordinates are in WGS84 UTM Zone 33 South.

From February 2023, the Company has initiated a close spaced in-situ soil pXRF analysis survey on each of target areas announced in November 2022. “Sampling” grids of 20 x 10 m (20 m line spacing, 10 m sample spacing) are designed on each of the target areas with the aim of identifying areas with anomalous REE values as a follow-up to the 2022 exploration drilling program and allow for validation of exploration targeting methods that assist in the development of additional targets and prioritization of future drill targets. This survey was completed first on target T09, the Adder target. Approximately 72% of all points analysed on the Adder target returned anomalous grades ≥ 500 ppm (0.05%) TREO in soil, with the highest returning 0.32% TREO in soil. The anomalous concentrations of REE found in the soil are consistent with the discovery of mineralized rock chip grab samples providing further confirmation of this target. As at the date of this report, six (6) of the target areas have been completely surveyed, totalling 6,738 sample points.

EPL 8748

During the year ended March 31, 2023, the Company signed an agreement to acquire 85% of EPL 8748, located adjacent to EPL 6762 (“EPL 8748 Agreement”). Pursuant to the EPL 8748 Agreement, the Company will acquire an 85% interest in EPL 8748 for aggregate cash consideration of \$210,000 and the issuance of an aggregate of 1,200,000 common shares of the Company (the “E-Tech Shares”). EPL 8748 will be held through a special purpose vehicle (“Newco”) that will be owned 85% by the Company, and the parties to the EPL 8748 Agreement will enter into a shareholders agreement, which will contain terms providing that if any party’s interest is reduced to less than 10%, its interest will

automatically be converted into a 5% free carried interest. Annually, on the anniversary of the EPL 8748 Agreement, the Company will have the option to acquire the minority interest from the vendor at fair market value.

The E-Tech Shares will be issued to the vendor once certain conditions set out in the EPL 8748 Agreement have been met, including the granting of EPL 8748 to the vendor and the transfer of EPL 8748 to Newco. Upon issuance, the E-Tech Shares will be subject to escrow or other trading restrictions and will be released from these restrictions in tranches over a period of four years from the closing date of the transaction. Cash consideration of \$30,000 was paid by the Company during the year ended March 31, 2023, with \$80,000 to be paid on completion of certain conditions including submission of the application to transfer EPL 8748. The balance of \$100,000 will be paid on completion of the transfer of EPL 8748 to Newco.

The transaction pursuant to the terms and conditions of the EPL 8748 Agreement is conditional upon TSX Venture Exchange approval.

Future Exploration Plans

The Company plans to continue its geochemical in-situ soil sampling programme over specific areas of interest. The geochemical in-situ soil sampling campaign is executed using the pXRF analyser. It is envisioned that results from the ongoing RC drilling and this geochemical sampling will lead to a further follow up RC and diamond drilling program to be focused over the mineralised areas identified.

The Company has contracted Excel Dynamic Solutions, an independent consulting firm specialising in the natural resource sector, to apply for an ECC for EPL 8748. During this period, the Company will conduct non-invasive exploration activities that will include desktop interpretation of the government-flown airborne regional geophysical data and reconnaissance ground truthing and evaluation of anomalies. It is expected that this work will highlight additional areas with anomalous REE.

QA/QC Program

All E-Tech sample assay results have been independently monitored through a QA/QC program, including the insertion of blind standard, certified reference material samples, blanks and duplicate samples. QA/QC samples make up between 10% to 15% of all samples submitted.

Sampling of RC chips from drilling was conducted in two stages. The initial stage of sampling was conducted during the drilling, each drilled metre collected from the rig mounted cyclone was then split in a 2:1 (2 way) riffle splitter, the smaller split fraction is then split again with a 1:1 (2 way) sample riffle splitter to create two approximately 2 kg samples. One sample was retained as a reference sample for future work, the other sample was collected as the laboratory sample stream and transported to the Activation Laboratories Ltd. sample preparation facility in Windhoek, Namibia. The sample was dried, crushed to 90% passing 2 mm, a 250 g sub-sample was riffle split and pulverized to 95% passing 105 µm. Sample pulps were sent to Activation Laboratories Ltd. in Ontario, Canada for analysis. REE analysis is by method 8-REE with the sample milled to 95% -200 mesh. To ensure complete fusion of resistate minerals; lithium metaborate/tetraborate fusion is used with analysis by ICP-OES and ICP-MS. Mass balance is calculated as an additional quality control technique to ensure complete analysis.

For DD core, the sample was sawn in half on site by a Pro-core core saw and the half drill-core samples securely transported to Activation Laboratories Ltd. sample preparation facility in Windhoek, Namibia. The core is dried, crushed to 90% passing 2 mm, riffle splitting a 250 g sub-sample and pulverizing to 95% passing 105 µm. These sample pulps are sent to Activation Laboratories Ltd. in

Ontario, Canada for analysis. REE analyses are completed by method 8-REE. The sample is milled to 95% -200 mesh. To ensure complete fusion of resistate minerals; lithium metaborate/tetraborate fusion is used with analyses by ICP-OES and ICP-MS. Mass balance is calculated as an additional quality control technique to ensure complete analysis.

For rock chip grab samples, fresh rock samples are collected in the field from in-situ rock sub-/outcrops using a geological hammer. Samples are labelled and placed in 100-micron industrial plastic sample bags. The sample's ID, GPS coordinates in WGS84 UTM Zone 33S format, and geological description are recorded. Samples are securely transported to Activation Laboratories Ltd.'s sample preparation facility in Windhoek, Namibia. The rock samples are dried, crushed to 80% passing 2 mm, riffle splitting a 250 g sub-sample and pulverizing to 95% passing 105 µm. Sample pulps are sent to Activation Laboratories Ltd. in Ontario, Canada for analysis. REE analysis is by method 8-REE. The sample is ground to 95% -200 mesh to ensure complete fusion of resistate minerals using lithium metaborate/tetraborate fusion with subsequent analysis by ICP-OES and ICP-MS. Mass balance is calculated as an additional quality control technique to ensure complete analysis.

For on-site / in-situ soil pXRF analysis, the pre-loaded sample point is located using the GPS. The sampling area (i.e. pXRF analyzing spot on the ground) is swept free from the overlying gravel/rubble/pebbles using a broom. Soil material is loosened with the edge of a spade and scooped into a sieve. The material is poured through a sieve and the ≤1 mm fraction is collected in a container. A 100-micron plastic sample bag is placed over the fine material to prevent the pXRF from coming in contact with the soil. The pXRF analyzes the fine material in the container with read times of 120 seconds (40 seconds per beam), and the test results are saved. The pXRF is calibrated at the start with two (2) certified standards. Blanks (pulverized marble rock chips) and REE standards are inserted in the analyzing sequence for every 20 samples analyzed to continually monitor the performance of the instrument. Preliminary pXRF results will be superseded by lab quality assay results when they are received.

Health and safety

No significant injuries have occurred for the duration of the operations. Toolbox talks and potential hazards are shared among the team regularly.

Resource Property Expenditures

The following tables detail the acquisition costs and the exploration expenditures incurred on the resource properties during the years ended March 31, 2023 and 2022.

	Total March 31, 2023	Total March 31, 2022
	\$	\$
EPL Acquisition Costs	34,626	255
Geophysical, Geological and Environmental Consulting	474,045	582,721
Field Equipment and Rental	77,880	103,372
Drilling, Sample Preparation, Analysis, and Transport	240,836	2,088,807
TOTAL	827,387	2,775,155
Opening balance	3,563,821	788,666
Ending balance	4,391,208	3,563,821

EPL 6762 was renewed on July 27, 2021 by the Minister of Mines and Energy for a further period of two years from July 20, 2021 to July 19, 2023. On April 18, 2023, the Company submitted a renewal application, which was filed more than 90 days before the expiry of EPL 6762, in line with section 72(2)(a) of the Minerals Act. The EPL 6762 renewal application is currently being

considered for renewal. During this period, the Company continues to have the full and exclusive right, including receipt of all required permits, licences and other applicable government approvals in respect of EPL 6762.

Cash consideration of \$30,000 was paid by the Company during the year ended March 31, 2023 pursuant to the EPL 8748 Agreement.

Selected Annual and Quarterly Information

Annual Information

The following table details the annual results for the years ended March 31, 2023, 2022, and 2021:

	March 31, 2023	March 31, 2022	March 31, 2021
	\$	\$	\$ ⁽¹⁾
Net loss and comprehensive loss	(1,180,712)	(7,670,737)	(201,430)
Total assets	4,982,798	5,812,396	856,467
Total liabilities	365,414	400,356	1,088,390
Shareholders' equity (deficiency)	4,617,384	5,412,040	(231,923)
Cash dividends per common share	N/A	N/A	N/A

(1) Comparative financial statements of E-Tech Namibia were denominated in Namibian dollars ("NAD\$") for the year ended March 31, 2021. In the table, NAD\$ is converted at foreign exchange spot rate of C\$0.08451 to NAD\$1 for fiscal 2021. For the net loss and comprehensive loss, NAD\$ is converted at foreign exchange average rate C\$0.08104 to NAD\$1 for fiscal 2021.

The Company expects to record losses until such time as an economic resource is developed and exploited on the Company's exploration properties. The Company's net loss could be significantly affected by any impairment or abandonment of any resource property.

Summary of Quarterly Results

Expressed in thousands of Canadian dollars ("C\$"), except per share amounts:

	Q4 2023	Q3 2023	Q2 2023	Q1 2023	Q4 2022	Q3 2022	Q2 2022	Q1 2022
	\$	\$	\$	\$	\$	\$	\$	\$
Net loss for the period	255	230	113	583	646	6,718	205	102
Basic & diluted net loss per share	0.00	0.00	0.00	0.01	0.08	0.12	1,021	510
Total assets	4,983	5,055	5,251	5,386	5,812	6,057	2,340	1,518
Total liabilities	365	271	331	251	400	402	2,879	1,852
Cash dividends per common share	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A

Results of operations for the year ended March 31, 2023

During the year ended March 31, 2023, the Company had a net loss of \$1,180,712, compared to a net loss of \$7,670,737 during the year ended March 31, 2022. The decrease is due to the Company's QT completed on October 15, 2021, which resulted in a listing expense in the prior year of \$6,370,752. The listing expense included the fair value of the common shares of the Company retained by the former shareholders of the Company, which amounted to \$6,492,875. The fair value of the Company's common shares less net assets acquired of \$122,123 was recorded as a listing expense.

As a new public company, professional and consulting fees were \$278,160 during the year ended March 31, 2023, compared to \$211,992 during the prior year. Regulatory and filing fees decreased approximately \$18,000, as the Company incurred regulatory costs associated with the Transaction and

the Company's Frankfurt Stock Exchange listing costs during the prior year. Travel costs increased by approximately \$9,000, marketing and promotion costs increased by approximately \$22,000, community social expenses were approximately \$20,000, and salaries and benefits increased approximately \$54,000 during the current year as the Company increased its operations since the Transaction, including the start of a digital media program and the hiring of its CEO and CFO during the third quarter of fiscal 2022.

Share-based compensation during the year ended March 31, 2023 was \$386,056 (2022 - \$603,845), net of a recovery of share-based compensation expense of \$228,288 due to the forfeiture of options during the current year. The Company incurred finance costs of \$107,126 in the prior year. The finance costs related primarily to interest on the Company's convertible debentures, which were converted during the year ended March 31, 2022. Refer to *Transactions with Related Parties, Convertible debenture* for further information on the Company's conversion of convertible debentures.

A foreign exchange loss of \$37,889 was recorded for the year ended March 31, 2023, compared to a foreign exchange gain of \$10,989 in the prior year, primarily due to the weakening of the Namibian dollar during the current year. The Company expects to continue incurring foreign exchange gains and losses arising from fluctuations in the value of the United States dollar and the Namibian dollar relative to the Canadian dollar.

Liquidity and Capital Resources

	As at March 31, 2023 \$	As at March 31, 2022 \$
Cash	321,159	1,797,690
Resource properties	4,391,208	3,563,821
Equipment	78,469	33,333
Total assets	4,982,798	5,812,396
Total liabilities	365,414	400,356
Shareholders' equity and capital contribution	4,617,384	5,412,040
Working capital*	147,707	1,814,886

*Working capital is determined by deducting current liabilities of \$365,414 (2022 - \$400,356) from current assets of \$513,121 (2022 - \$2,215,242) on the Company's Consolidated Statements of Financial Position. Working capital is not a standardized measure and might not be comparable to disclosures by other issuers.

As at March 31, 2023, the Company had cash of \$321,159 and working capital of \$147,707, compared to the March 31, 2022 cash balance of \$1,797,690 and working capital of \$1,814,886. During the year ended March 31, 2023, the Company used cash of \$451,019 on its operating expenditures, \$60,027 on additions to equipment and \$965,485 on its resource property expenditures (2022 - \$1,253,839 on operating activities, \$30,718 on capital asset additions and \$2,489,000 on resource property expenditures).

On July 21, 2023, the Company announced its plan to raise up to \$500,000 through a private placement financing of up to 8,333,334 shares at \$0.06 per share (the "Financing"). Proceeds from the Financing will be used to support the Company's ongoing exploration and operational activities. To facilitate the Financing, E-Tech has entered into an agreement with Numus Capital Corp. to act as agent. E-Tech has agreed to pay the agent a cash fee of 7% of the proceeds raised, except on subscriptions received from directors, officers, and employees of E-Tech, and to issue compensation warrants entitling the agent to purchase that number of commons shares as is equal to 7% of the shares, except on subscriptions received from directors, officers, and employees of E-Tech. Each compensation warrant will be exercisable into a common share of E-Tech at \$0.06 per share for 24 months from closing. Completion of the Financing is subject to the satisfaction of certain conditions, including the approval

of the TSX Venture Exchange. All securities issued pursuant to the Financing will be subject to a four-month and one-day hold period.

During the year ended March 31, 2022, the Company announced and completed an Offering of subscription receipts at a price of \$0.25, each convertible into one post-split Company common share. 20,000,000 subscription receipts were issued for aggregate gross proceeds of \$5,000,000. The gross proceeds raised in connection with the Offering were held in escrow on behalf of the subscribers by Computershare Trust Company of Canada (the “Escrow Agent”) until completion of the Transaction on October 15, 2021, when the subscription receipts were converted to 20,000,000 common shares of the Company.

In connection with the Offering, Numus Capital Corp., a related party (the “Agent”), received a cash commission equal to \$350,000, representing 7% of the aggregate gross proceeds raised by the Company from the sale of subscription receipts in connection with the Offering; and 1,400,000 brokers warrants entitling the Agent to purchase that number of post-split common shares in the Company equal to seven percent (7%) of the subscription receipts in the Offering. The warrants are exercisable into 1,400,000 common shares of the Company at a price of \$0.25 per share and expire on October 15, 2023. The value attributed to the warrants was \$238,353. In addition to the Agent fee and the warrants issued, the Company incurred other costs of \$28,020, primarily related to legal and regulatory fees associated with the financing. The net proceeds of the Offering amounted to \$4,621,980.

During the year ended March 31, 2022, the Company also acquired cash of \$276,571 on completion of the Transaction and repaid loans of \$218,673.

During the years ended March 31, 2022 and 2021, the Company received a loan from Numus Financial Inc. (“Numus”) in the amount of \$835,989 for the year ended March 31, 2022 and \$760,011 during the year ended March 31, 2021, including interest. The loan was in the form of a convertible debenture, which was immediately, prior to the completion of the Transaction, settled in exchange for E-Tech Namibia shares. Any E-Tech Namibia shares issued pursuant to the settlement were exchanged for shares of the Company based on the exchange ratio for the Transaction. This conversion was completed on October 15, 2021. At the time of the Transaction, a total of \$1,596,000, including \$96,000 in interest, had been received from Numus in the form of a convertible debenture.

Management estimates current working capital may not be sufficient to fund all of the Company’s planned expenditures. The Company has recorded losses since incorporation to the current year and expects to incur losses for the foreseeable future as exploration activities and associated executive and administration costs continue on the Company’s projects. The ability of the Company to continue as a going concern is dependent on securing additional financing. There is no certainty that the Company will ultimately achieve profitable operations, become cash flow positive, or raise additional debt and/or equity capital in the future. The reader should refer to the “Going Concern” disclosure in the Company’s audited financial statements for the years ended March 31, 2023 and 2022.

Commitments and Contingencies

E-Tech had an agreement with the CEO which could be terminated by the Company or the Consultant with three months’ notice. If this agreement is terminated by the Company without cause, an amount equal to three months of compensation plus one more per completed year of service will be due to the CEO. During the year ended March 31, 2023, the Company terminated its CEO agreement and funded the termination payment of \$58,333. In addition, 1,250,000 stock options held by the former CEO prior to the termination of the CEO agreement were forfeited during the year in accordance with the Company’s stock option plan.

As at March 31, 2023, E-Tech has a services agreement with Numus Financial Inc. (“Numus”) for the provision of consulting services, controller services, rent and other office costs, at a fee of \$12,200 per month and continuing until both parties mutually agree to terminate. As at March 31, 2023, the Company also has an agreement with Numus for the provision of digital media services at a fee of \$5,800 per month until November 30, 2023, with the option to extend. See *Transactions with Related Parties*, for further details on the agreements with Numus.

Off-Balance Sheet Arrangements

At March 31, 2023 and the date of this report, E-Tech had no off-balance sheet arrangements such as guarantee contracts, contingent interest in assets transferred to an entity, derivative instruments obligations or any obligations that trigger financing, liquidity, market or credit risk to the Company.

Transactions with Related Parties

Parties are considered to be related if one party has the ability, directly or indirectly, to control the other party or exercise significant influence over the other party in making financial and operating decisions. Related parties may be individuals or corporate entities. A transaction is considered to be a related party transaction when there is a transfer of resources or obligations between related parties.

Accounts payable includes amounts payable to officers, directors and related party companies of \$129,661 at March 31, 2023 (2022 - \$78,111). The following related party transactions were in the normal course of operations and were measured at the exchange amounts, which are the amounts agreed to by the related parties.

During the year ended March 31, 2023, professional and consulting fees and salaries and benefits in the amount of \$262,838 were incurred for the services of the CEO, the interim CEO, the CFO, and two directors (2022 - \$322,344). Included in the fees and salaries paid to key management are \$62,588 in fees that were capitalized to resource properties during the year (2022 - \$161,875) for services of the CEO and two directors, as well as a CEO termination fee of \$58,333. For the year ended March 31, 2022, the amounts paid to key management also includes \$83,207 in consulting fees paid by E-Tech Kalapuse (Mining) Proprietary Limited prior to the Transaction to a related party individual who would become the CEO of the Company as at the date of the Transaction.

During the year ended March 31, 2022, the Company granted 3,175,000 stock options, of which 2,450,000 were granted to officers and directors of the Company. During the year ended March 31, 2023, the Company granted 1,060,000 stock options, of which 800,000 were granted to officers and directors of the Company. During the year ended March 31, 2023, 1,250,000 stock options held by the former CEO with an exercise price of \$0.55 per share were forfeited.

At March 31, 2023 and 2022, the Company has a services agreement with Numus Financial Inc. (“Numus”), a related party company owned by the interim CEO and a significant shareholder of the Company for the provision of consulting services, controller services, rent and other office costs, at a total fee of \$12,200 per month and continuing until both parties mutually agree to terminate. Service fees are incurred on a cost recovery basis and include general and administration charges such as utilities and accounting services of the Company. During the year ended March 31, 2023, the Company incurred costs for consulting and controller services in the amount of \$126,000 (2022 - \$57,750), and incurred rent and office costs in the amount of \$20,400 (2022 - \$9,350).

As outlined in the services agreement effective October 15, 2021, if the services agreement is cancelled by the Company without just cause (as defined in the agreement), a break fee of eighteen (18) months of remuneration, being \$144,000, will be payable to Numus, in addition to the service

fees applicable for the 90 day notice period. If the controller services are cancelled by the Company without just cause, a break fee of six (6) months of remuneration, being \$15,000, will be payable to Numus, in addition to the service fees applicable for the 90 day notice period. If the office services are cancelled by the Company without just cause, a break fee of six (6) months of remuneration, being \$10,200, will be payable to Numus, in addition to the service fees applicable for the 90 day notice period. Numus also will have a right of first refusal to act as an advisor on an E-Tech transaction for a fee of 1.25% of the value of the transaction.

Also at March 31, 2023, the Company has an agreement with Numus for the provision of digital media services. The agreement provided for the provision of digital media services in the amount of \$5,000 per month until November 30, 2022, which was extended until November 30, 2023 in the amount of \$5,800 per month, with a further option to extend. During the year ended March 31, 2023, the Company incurred fees for digital media services in the amount of \$63,200 (2022 - \$20,000).

Prior to the completion of the Transaction on October 15, 2021, a related party relationship existed between E-Tech Namibia and its parent company, E-Tech Metals Limited ("E-Tech Metals"). As at March 31, 2021, amounts payable to E-Tech Metals were \$218,673 (NAD\$2,587,540), which was repaid in full during the year ended March 31, 2022.

As a result of the Transaction, the Company acquired each of the 333 issued and outstanding E-Tech Namibia shares pursuant to the terms of the Definitive Agreement, in exchange for 111,111.2 common shares of the Company (the "Exchange Ratio"). Existing shareholders of E-Tech Namibia's 200 issued and outstanding E-Tech Namibia shares received 22,222,240 common shares of the Company in aggregate at closing of the Transaction.

During the years ended March 31, 2022 and 2021, the Company received loans from related parties, including a director of the Company and other significant shareholders, in the form of a convertible debenture. The balance of the convertible debenture was, prior to the completion of the Transaction, settled in exchange for E-Tech Namibia shares and further exchanged for shares of the Company based on the exchange ratio for the Transaction. As at October 15, 2021, the amount of the convertible debenture was \$1,596,000, including interest. Holders of these convertible debentures, in the amount of \$1,596,000, received 133 shares of E-Tech Namibia upon conversion, which were exchanged for 14,777,790 common shares of the Company.

Numus Capital acted as the Agent for the Company's subscription receipt. Numus Capital is an Exempt Market Dealer and a related party owned by the interim CEO and a significant shareholder of the Company. As compensation for its services for the Offering, Numus Capital received a 7% cash commission of \$350,000 and 1,400,000 brokers warrants to purchase 1,400,000 common shares of the Company. The warrants have an exercise price of \$0.25 per common share and expire on October 15, 2023.

Critical Accounting Estimates

The preparation of consolidated financial statements in conformity with IFRS requires management to make estimates and assumptions that affect the amounts reported in the financial statements and notes. Critical accounting estimates used in the preparation of the financial statements include the Company's estimate of recoverable value of its mineral properties and related deferred expenditures, the value of share-based compensation, and the valuation of any deferred income tax assets and liabilities. These estimates involve considerable judgment and are, or could be, affected by significant factors that are out of the Company's control.

The Company's recoverability of the recorded value of its mineral properties and associated deferred expenses is based on market conditions for metals and minerals, underlying mineral resources associated with the properties and future costs that may be required for ultimate realization through mining operations or by sale. The Company is in an industry that is dependent on a number of factors, including environmental, legal and political risks, the existence of economically recoverable resources, and the ability of the Company to obtain necessary financing to complete the development and future profitable production or the proceeds of disposition thereof.

At the end of each reporting period, the Company assesses each of its mineral resource properties to determine whether any indication of impairment exists. Where an indicator of impairment exists, a formal estimate of the recoverable amount is made, which is considered to be the higher of the fair value less costs to sell and value in use.

Deferred income tax assets and liabilities are computed based on differences between the carrying amounts of assets and liabilities on the balance sheet and their corresponding tax values. Deferred income tax assets also result from unused loss carry-forwards and other deductions to the extent that it is probable that taxable profit will be available against which the deductible temporary differences, and the carry forward of tax credits and unused tax losses may be utilized.

Risks and Uncertainties

Known risks and uncertainties are not the only ones facing the Company. Additional risks and uncertainties not currently known to the Company, or that the Company currently deems immaterial, may also impair the operations of the Company. If any such risks actually occur, the financial condition, liquidity and results of operations of the Company could be materially adversely affected and the ability of the Company to implement its growth plans could be adversely affected.

The following is a description of certain risks and uncertainties that may affect the business of the Company.

Limited Operating History - The Company is a relatively new company with limited operating history and no history of business or mining operations, revenue generation or production history. The Company has yet to generate a profit from its activities. The Company will be subject to all of the business risks and uncertainties associated with any new business enterprise, including the risk that it will not achieve its growth objective. The Company anticipates that it may take several years to achieve positive cash flow from operations.

Exploration, Development and Operating Risks - The exploration for and development of mineral resources involves significant risks, which even a combination of careful evaluation, experience and knowledge may not eliminate. Few properties which are explored are ultimately developed into producing mines. There can be no guarantee that the estimates of quantities and qualities of metals and minerals disclosed will be economically recoverable. With all mining operations there is uncertainty and, therefore risk associated with operating parameters and costs resulting from the scaling up of extraction methods tested in pilot conditions. Mineral exploration is speculative in nature and there can be no assurance that any minerals discovered will result in an increase in the Company's resource base.

The Company's operations are subject to all of the hazards and risks normally encountered in the exploration, development and production of metals and minerals. These include unusual and unexpected geological formations, rock falls, seismic activity, flooding and other conditions involved in the extraction of material, any of which could result in damage to, or destruction of, mines and other producing facilities, damage to life or property, environmental damage and possible legal liability. Although precautions to minimize risk will be taken, operations are subject to hazards that may result

in environmental pollution and consequent liability that could have a material adverse impact on the business, operations and financial performance of the Company.

Substantial Capital Requirements and Liquidity - Substantial additional funds for the establishment of the Company's current and planned mining operations will be required. No assurances can be given that the Company will be able to raise the additional funding that may be required for such activities, should such funding not be fully generated from operations. Mineral prices, environmental rehabilitation or restitution, revenues, taxes, transportation costs, capital expenditures, operating expenses and geological results are all factors which will have an impact on the amount of additional capital that may be required. To meet such funding requirements, the Company may be required to undertake additional equity financing, which would be dilutive to shareholders. Debt financing, if available, may also involve restrictions on financing and operating activities. There is no assurance that additional financing will be available on terms acceptable to the Company or at all. If the Company is unable to obtain additional financing as needed, it may be required to reduce the scope of its operations or anticipated expansion.

Fluctuating Mineral Prices - The economics of mineral exploration is affected by many factors beyond the Company's control, including commodity prices, the cost of operations, variations in the grade of minerals explored and fluctuations in the market price of minerals. Depending on the price of minerals, it may be determined that it is impractical to continue the mineral exploration operation.

Mineral prices are prone to fluctuations and the marketability of minerals is affected by government regulation relating to price, royalties, allowable production and the importing and exporting of minerals, the effect of which cannot be accurately predicted. There is no assurance that a profitable market will exist for the sale of any minerals found on the Company's properties.

Regulatory Requirements - The current or future operations of the Company require permits from various governmental authorities and such operations are and will be governed by laws and regulations governing exploration, development, production, taxes, labour standards, occupational health, waste disposal, toxic substances, land use, environmental protection, site safety and other matters. Companies engaged in the exploration and development of mineral properties generally experience increased costs and delays in development and other schedules as a result of the need to comply with applicable laws, regulations and permits. There can be no assurance that all permits which the Company may require for the facilities and conduct of exploration and development operations will be obtainable on reasonable terms or that such laws and regulation would not have an adverse effect on any exploration and development project which the Company might undertake.

Failure to comply with applicable laws, regulations and permitting requirements may result in enforcement actions, including orders issued by regulatory or judicial authorities causing operations to cease or be curtailed and may include corrective measures requiring capital expenditures, installation of additional equipment or remedial actions. Parties engaged in exploration and development operations may be required to compensate those suffering loss or damage by reason of the exploration and development activities and may have civil or criminal fines or penalties imposed upon them for violation of applicable laws or regulations. Amendments to current laws, regulation and permits governing operations and activities of mineral companies, or more stringent implementation thereof, could have a material adverse impact on the Company and cause increases in capital expenditures or exploration and development costs or require abandonment or delays in the development of new properties.

In Namibia, an Exclusive Prospecting License is valid for a period of three years and may be further renewed twice for a period of two years per renewal. Further renewals are not guaranteed and are at the sole discretion of the Minister of Mines and Energy, and only if the Minister of Mines and Energy

deems it desirable in the interests of the development of the mineral resources of Namibia. There is no guarantee that the Company's EPLs will be renewed in the future.

Financing Risks and Dilution to Shareholders - The Company has limited financial resources and no revenues. If the Company's exploration program on its exploration properties is successful, additional funds will be required for the purposes of further exploration and development. There can be no assurance that the Company will be able to obtain adequate financing in the future or that such financing will be available on favorable terms or at all. It is likely such additional capital will be raised through the issuance of additional equity, which will result in dilution to the Company's shareholders.

Title to Properties - Acquisition of title to mineral properties is a very detailed and time-consuming process. Title to, and the area of, mineral properties may be disputed. The Company cannot give an assurance that title to its exploration properties will not be challenged or impugned. Mineral properties sometimes contain claims or transfer histories that examiners cannot verify. A successful claim that E-Tech does not have title to its exploration properties could cause the Company to lose any rights to explore, develop and mine any minerals on that property, without compensation for its prior expenditures relating to such property.

Requirement for Permits and Licences - A substantial number of permits and licences may be required should the Company proceed beyond exploration; such licences and permits may be difficult to obtain and may be subject to changes in regulations and in various operational circumstances. It is uncertain whether the Company will be able to obtain all such licences and permits.

Competition - There is competition within the mining industry for the discovery and acquisition of properties considered to have commercial potential. The Company competes with other mining companies, many of which have greater financial, technical and other resources than the Company, for, among other things, the acquisition of mineral claims, leases and other mineral interests as well as for the recruitment and retention of qualified employees and other personnel.

Reliance on Management and Dependence on Key Personnel - The success of the Company will be largely dependent upon on the performance of its directors and officers and the ability to attract and retain key personnel. The loss of the services of these persons may have a material adverse effect on the Company's business and prospects. The Company will compete with numerous other companies for the recruitment and retention of qualified employees and contractors. There is no assurance that the Company can maintain the service of its directors and officers or other qualified personnel required to operate its business. Failure to do so could have a material adverse effect on the Company and its prospects.

No Mineral Reserves - The Company's exploration property is an early-stage exploration property with only an initial inferred resource, and no mineral reserve estimates may be predicted or estimated in respect of the property. Mineral resources and reserves are, in the large part, estimates and no assurance can be given that the anticipated tonnages and grades will be achieved or that the indicated level of recovery will be realized. Resources and reserve estimates for properties that have not yet commenced production may require revision based on actual production experience. Market price fluctuations of metals, as well as increased production costs or reduced recovery rates, may render mineral reserves containing relatively lower grades of mineralisation uneconomic and may ultimately result in a restatement of reserves. Moreover, short-term operating factors relating to the mineral reserves, such as the need for orderly development of the ore bodies and the processing of new or different mineral grades, may cause a mining operation to be unprofitable in any particular accounting period.

Environmental Risks - The Company's exploration and evaluation programs will, in general, be subject to approval by regulatory bodies. Additionally, all phases of the mining business present environmental risks and hazards and are subject to environmental regulation pursuant to a variety of international conventions and national, provincial and municipal laws and regulations. Environmental legislation provides for, amongst other things, restrictions and prohibitions on spills, as well as releases or emissions of various substances produced in association with mining operations. The legislation also requires that wells and facility sites be operated, maintained, abandoned and reclaimed to the satisfaction of applicable regulatory authorities. Compliance with such legislation can require significant expenditures and a breach may result in the imposition of fines and penalties, some of which may be material. Environmental legislation is evolving in a manner expected to result in stricter standards and enforcement, larger fines and liabilities and potentially increased capital expenditures and operating costs.

Governmental Regulations and Processing Licences and Permits - The activities of the Company are subject to Namibian approvals, various laws governing prospecting, development, land resumptions, production taxes, labour standards and occupational health, mine safety, toxic substances and other matters. Although the Company believes that its activities are currently carried out in accordance with all applicable rules and regulations, no assurance can be given that new rules and regulations will not be enacted or that existing rules and regulations will not be applied in a manner which could limit or curtail production or development. Amendments to current laws and regulations governing operations and activities of exploration and mining, or more stringent implementation thereof, could have a material adverse impact on the business, operations and financial performance of the Company. Further, the exploration licences and permits issued in respect of its projects may be subject to conditions which, if not satisfied, may lead to the revocation of such licences. In the event of revocation, the value of the Company's investments in such projects may decline.

Local Resident Concerns - Apart from ordinary environmental issues, work on, or the development and mining of the Company's property could be subject to resistance from local residents that could either prevent or delay exploration and development of the property.

Management Inexperience in Developing Mines - The management of the Company has some experience in exploring for minerals but may lack some or all of the necessary technical training and experience to successfully develop and operate a mine. Without adequate training or experience in these areas, management may not be fully aware of many of the specific requirements related to working within the mining industry and their decisions and choices may not take into account all available and necessary engineering or managerial approaches that experienced mine operating companies commonly use to successfully develop a mine. Consequently, the Company's operations, earnings and ultimate financial success could be materially adversely affected.

Conflicts of Interest - Certain of the directors and officers of the Company are engaged in, and will continue to engage in, other business activities on their own behalf and on behalf of other companies (including mineral resource companies) and, as a result of these and other activities, such directors and officers of the Company may become subject to conflicts of interest.

Uninsurable Risks - Exploration, development and production operations on mineral properties involve numerous risks, including unexpected or unusual geological operating conditions, rock bursts, cave-ins, fires, floods, earthquakes and other environmental occurrences. It is not always possible to obtain insurance against all such risks and the Company may decide not to insure against certain risks as a result of high premiums or other reasons. Should such liabilities arise, they could have an adverse impact on the Company's results of operations and financial condition and could cause a decline in the value of the Company's shares. The Company does not intend to maintain insurance against environmental risks.

Litigation - The Company and/or its directors may be subject to a variety of civil or other legal proceedings, with or without merit.

Dividends - To date, the Company has not paid any dividends on its outstanding shares. Any decision to pay dividends on the shares of the Company will be made by its board of directors on the basis of the Company's earnings, financial requirements and other conditions.

Disclosure Controls and Procedures and Internal Controls over Financial Reporting

Disclosure controls and procedures ("DC&P") are intended to provide reasonable assurance that material information is gathered and reported to senior management to permit timely decisions regarding public disclosure. Internal controls over financial reporting ("ICFR") are intended to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with International Financial Reporting Standards.

TSX Venture Exchange listed companies are not required to provide representations in their annual and interim filings relating to the establishment and maintenance of DC&P and ICFR, as defined in Multinational Instrument MI 52-109. In particular, the CEO and CFO certifying officers do not make any representations relating to the establishment and maintenance of (a) controls and other procedures designed to provide reasonable assurance that information required to be disclosed by the issuer in its annual filings, interim filings or other reports filed or submitted under securities legislation is recorded, processed, summarized and reported within the time periods specified in securities legislation; and (b) processes to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with the issuer's GAAP.
